\textit{On the basis of a direct initial boundary value problem, inverse problems are formulated and studied to determine the factors of the right-hand sides of the mixed parabolic-hyperbolic type equation that depend on time. On the basis of the theory of integral equations, the corresponding uniqueness and existence theorems for solutions of inverse problems are proved.}

\textit{Key words: equation of mixed parabolic-hyperbolic type, inverse problem, uniqueness, existence, series, small denominators, integral equations.}
